

Supporting your child in maths:

At the last parents evening, many parents expressed a desire to be able to support their children more in maths, but not knowing how to do the strategies and methods that we teach in school. We have updated our website with useful documents and videos to enable you to support your child and understand some of the strategies we teach.

Curriculum pages for maths on the website:

<https://www.courtlanejunior.co.uk/page/?title=Maths+Curriculum&pid=209>

On this page, you will find schemes of work, expectations and progression documents for each year group. The progression document shows the strategies children will be using in their year group (with a brief explanation and example of each). If your child is struggling with a strategy, you can find out more here.

Useful videos for maths:

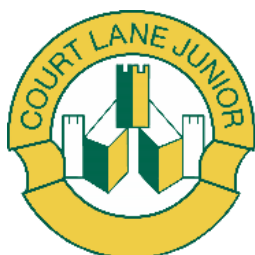

<https://www.courtlanejunior.co.uk/page/?title=Maths+Curriculum+Useful+Videos&pid=210>

There are a selection of videos demonstrating some of the most common strategies that we use for the four operations in school. Although this is not all of the strategies, it may help with the understanding of other, related strategies.

Maths No Problem Parent videos:

<https://mathsnoproblem.com/en/parent-videos>

Here, you can find explanations from the MNP team themselves, underpinning the rationale behind the scheme and brief videos of key features and strategies within the scheme.

**PARENT WORKSHOP
WITH MRS RAE
(MATHS LEAD):
Tuesday 12th March
6pm – large hall**
