

# SPRING IN Y3

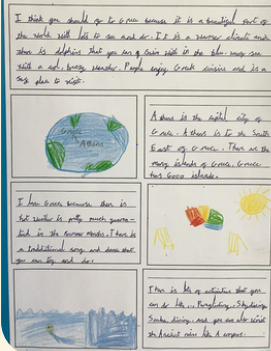

This term has been jam packed with learning in Year 3. The children have been immersed in the Stone Age, discovered all about the warmer climate in Greece and have been planting seeds for different experiments. They have created written poems, played both tennis and rugby and have created packaging for chocolate eggs.

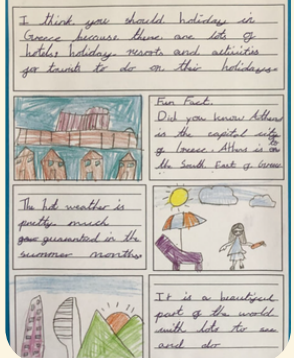

## \* GREECE

This half term we have been transported to the beautiful country of Greece. The children have learnt about the warmer climate, culture and landscape. We have recapped compass points and human and physical features which led to us creating some wonderful posters all about life in the Mediterranean.

### GREECE

## \* SPRING HAS SPRUNG

Pupils have been planting seeds in class to learn about what plants need to survive and grow. In French they have been naming the different seasons and are beginning to put these words into sentences. Look out to see if wildflowers start to spring up in the class planters!

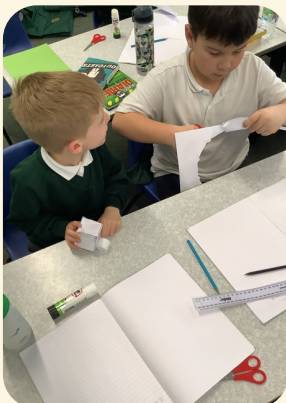

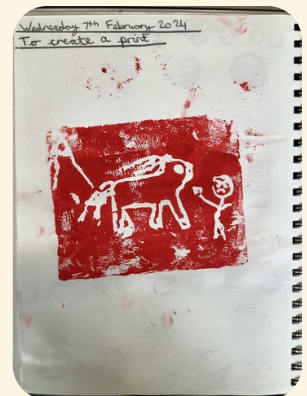

# SPECIAL EVENTS AND LEARNING

It was wonderful to see so many children dressing up as their favourite book character and sharing stories on World Book Day. We are all so proud of everyone for performing their poetry battle to such a large audience. Well done Year 3!

## \* THE STONE AGE

Spring term saw us complete our Stone Age topic. The children learnt about Stone Age settlements and how the Iron Age and Bronze Age shaped the world we live in today. Cave art from Lascaux in France influenced our printing project in art.

## \* STEM

This term's Computing curriculum focused on creating branching databases and short animations using iMotion. In DT we have also made shell structures using cardboard to package chocolate eggs.
